Focus and content of course	<p>Since many Low and Middle Income countries (LMICs) do not have well developed emergency ambulance services it is necessary to find ways to assist injured road users until specialized medical help arrives . Participants will learn how other LMICS naboymorolParticipants will gain an overview of international best practices in emergency medical ambulance systems, performance indicators to monitor activities and the training needed for effective emergency medical services. They will also learn how integrated planning and joint training of first aiders, rescuers and police can reduce time to treatment on site and that more coordinated effective treatment in hospitals can save lives and minimize rehabilitation time. The general public or at least frequent travelers such as commercial drivers can be mobilized and instructed in a few very basic actions to keep injured persons alive until trained first aiders arrive</p> <p>During this course, site visits will be made to key health/ fire /rescue and police personnel dealing with post crash treatment, transport and management of casualties.</p>
Price (per participant) This assumes course is in English but with instantaneous translation available into one other language (e.g. Russian, Serbian, or other) if at least 15 participants agree the other language	Price to be agreed (5 days course).
